DETAILED ACTION

Reasons for Allowance

1. The following is an examiner's statement of reasons for allowance: Applicant's arguments dated April 6, 2004, as indicated in page 11 of 2nd paragraph states that the prior art does not overcome the claimed invention as amended. Examiner agrees with applicant's arguments. Therefore, claims 1-13 are allowed for the reasons stated below.

With respect to claims 1-8, the prior art does not teach or disclose an image sensing apparatus comprising a signal generation means for generating a trigger signal to perform an image sensing operation, wherein said image sensing apparatus determines, in accordance with a trigger signal, if said information processing apparatus is in a suspended status and, if so, said image sensing apparatus transmits a resume signal to said information processing apparatus.

With respect to claim 9, the prior art does not teach or disclose a control method for an image sensing apparatus including a signal generation means for generating a trigger signal to perform an image-sensing related operation, said control method comprising the steps of: determining, in accordance with a trigger signal, if said

Art Unit: 2626

information processing apparatus is in a suspended status, and, if so, transmitting a resume signal to said information processing apparatus.

With respect to claim 10, the prior art does not disclose or teach a storage medium storing control program codes for controlling an image sensing apparatus including a signal generation means for generating a trigger signal to perform image-sensing related operation operations, said storage medium comprising program codes determining, in accordance with a trigger signal, if said information processing apparatus is in a suspended status; and, if so, transmitting a resume signal to said information processing apparatus.

With respect to claim 11, the prior art does not disclose or teach an image sensing method in an image sensing apparatus and signal generation means for generating a trigger signal to perform an image-sensing related operation, said image sensing method comprising the steps of: determining if said information processing apparatus is in a suspended status, and transmitting, in accordance with information determined in the determining step, a resume signal to the information processing Apparatus.

With respect to claim 12, the prior art does not teach or disclose a control apparatus for controlling an image sensing apparatus comprising: a signal generation means for generating a trigger signal to perform an image-sensing related operation,

wherein said image sensing apparatus determines, in accordance with a trigger signal, if said information processing apparatus is in a suspended status and, if so, said control apparatus controls said image sensing apparatus to transmit a resume signal to said information processing apparatus.

With respect to claim 13, the prior art does not teach or disclose a storage medium storing program codes for an image sensing apparatus including signal generation means for generating a trigger signal to perform an image-sensing related operation, comprising: program codes for determining if the information processing apparatus is in a suspended status, and, program codes for transmitting, in accordance with information determined by said program codes for determining, a resume signal to the information processing apparatus.
